

A Report on One Day Talk on “Finding Fulfilment in Engineering and Life”

Engineers have a moral obligation to work for the betterment of the society. Engineers should use their contextual knowledge to assess societal, health, safety, legal and cultural issues and should take responsibilities relevant to their respective professional engineering practices. With the aim to make our students aware of their social responsibilities, this talk on “Finding Fulfilment in Engineering and Life” will be arranged.

Prof. Devdas Menon shared his knowledge with the faculties and the students about how we can balance our life and work, maintaining a healthy life. The talk made our students aware of their social responsibilities and enlightened them for finding fulfilment in their lives
